

GP community services

If you require long-acting reversible contraception (LARC) such as a coil (IUD/IUS) or an implant for contraceptive purposes, your local GP surgery may be able to offer this procedure from their own premises by a qualified Nurse or GP.

This means it may not always be necessary to come to one of our sexual health clinics if your registered GP, or a surgery more convenient to you, offers LARC services. This includes insertion, removal, or replacement services.

If you just require a coil removal (no coil replacement) the smear taker at your registered GP should be able to do this.

It is important to note that some surgeries may offer implants and coils, and some may offer just implants/ and or coils. It is always best to check the individual surgery website or telephone them to check.

Waiting times can differ also, some GP surgeries may be able to see you quicker than we can at our clinics.

Details of GP practices offering LARC are shown on the page below:
